

Oscar Villalobos Portfolio project

- Introduction

The idea for my portfolio project is to redesign the Red Elm Cafe to a bootstrap static responsive website and the goals

Will be to use the concepts learned in the course to make a responsive webpage with the information already provided in

The page itself. Benefits that this can bring is that I want to try to make as easy as possible to customers to

Search the website on menu items and location as well as contact info. That way customers will most likely be able to

Comeback and purchase more items.

- Market Survey

I have seen many websites and they have interesting layouts that differs for example images as background and the menu in front you have the hamburger menu in small viewports others have a map instead of the address others have the contact info all the way to the

Bottom of the page some on the navbar so interesting ideas to draw from.

- Features

Some of the features include the following

- Home Page
- About Us page
- Address , Contact information and socials
- Interesting facts
- Menu items
- References
